One who would write a book with many pictures on the distinguishing traits of first sprouts should be rewarded with the privilege of making many editions to follow the first sweeping sales. Plants have curious ways of beginning life. Those that start out rosettes become tall and spindling later; those that send forth threads develop woody stems.

Amount of Grain For Cattle. The difference in practice between the amounts of grain that are fed to cattle that are being fattened is very

great. The following rules will be found of some service to those who are feeding: First, alm to feed course foods to the greatest extent possible consistent with good increase, as they are the cheaper foods; second, feed enough concentrates to make the fattening reasonably rapid in order to save in the food of maintenance; third, when the fact that from eight years of age the droppings show that the food is not being well digested by the offensive odor that comes from them the grain should be reduced; fourth, when the animal gets off feed the grain should be at once cut down or the trouble is likely to get worse. At such times condimental food may aid in bringing the stomach back into tone,
